**DETAILED ACTION**

1. This Office action for US Patent Application 10/714,712 is responsive to communications filed 15 April 2008, in reply to the Non-Final Rejection of 15 January 2008. Currently, claims 1-2, 4-7, 9-11, 14-16, and 19-27 are pending. Of those, claims 26 and 27 are new. Claim 13 is newly cancelled.

***Response to Arguments***

2. Applicant's arguments, see 13-15, filed 15 April 2008, with respect to claims 1, 11, and 20 have been fully considered and are persuasive. The rejections of claims 1, 11, and 20 under 35 U.S.C. 103(a) have been withdrawn.

***Allowable Subject Matter***

3. Claims 1, 2, 4-7, 9-11, 14-16, and 19-27 are allowed.  
4. The following is an examiner's statement of reasons for allowance: Independent claims 1, 11, and 20 are directed to determining two sets of reference samples at two offset positions of a reference image that are "not-adjacent" and "distant" from each other, one offset generating a motion vector according to a small, local offset from a current block and the second offset generating a motion vector according to a global offset in the image. This limitation finds support in page 20: line 18–page 21: line 10 and figure 5 of the specification. Closest prior art US Patent 5,657,087 A (Jeong et al.) discloses, as shown in figure 4, a motion compensation system in which a first local

search area and a second global search area are produced. However, these search areas overlap in area, and so cannot be considered "distant".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patent Application Publication 2001/0014124 A1 (Nishikawa) teaches a motion picture processing system that determines an order of searching within a series of sub-ranges in a larger search range based on a global motion of an image. US Patent Application Publication 2003/0063673 A1 (Riemens et al.) teaches a motion estimation system in which several motion vectors are determined by searching within a relatively large search area with an offset determined by a global motion vector. European Patent Application Publication 961,499 A1 (Jozawa et al.) teaches a predictive encoding method in which a frame may be coded as encompassing one or more moving objects over a background sprite image having a global motion, with a decision to encode portions of the image as part of the objects with local motion compensated predictors or the background sprite with a global motion compensated predictor. However, Jozawa et al. is silent with respect to the relative positions of the local and global motion compensation.
